**Hon'ble CM inaugurates CIAL's
Business Jet Terminal**

Let this year bestow you with the opportunity of wonderful travelling to incredible places.

2023

EAR

We all are delighted at the moment, as one of our prestigious dreams has come true. CIAL's dream venture of affordable chartered flying is now made possible through the inauguration of our new Business Jet Terminal(T2). It is such a revolution in the field of airport operations as our terminal is completed in a short span of 10 months with a minimal budget of 30 crores. We have renovated a portion of the departure section of our old domestic terminal to suit our exclusive Business Jet Terminal, with a one fifth of the expense of building a new one. This, in turn, will certainly reflect in the operational expenses of T2 as CIAL accomplishes luxury chartered flying at comparatively low rates. As our Five star hotel, transit hotel etc.. are bordering on completion, we can easily integrate these opportunities easily with our business jet operations. CIAL's passenger traffic and revenue will also increase as a result, which will bring about astonishing changes in our tourism sector.

I feel gratified and spirited to comprehend the idea that this is the third influential project CIAL has commissioned in the last 12 months; the other two being Arripura Hydro project and Ponnani Solar plant. I thank you all for your contribution to our company towards the smooth transition as India's one of the four finest elite airports. I am extremely proud to applaud the extra efforts you put into your daily responsibilities to make our dreams come true. We've achieved progressive productivity and heights of innovation only because of the value you've contributed to our company.

CIAL has made huge advancements in the application of technology. We have successfully implemented the first phase of 'DigiYatra' and other passenger friendly user interfaces which helps in smooth transition of our airport to a digital environment. Many more projects are on board while some are nearing completion. All these ventures need our wholehearted participation and teamwork for its nourishment. We all should keep ourselves happy and energetic, fit and healthy, pragmatic and enthusiastic in order to achieve the best.

We are working to establish a successful presence in the global aviation market. As mentioned, several projects are on board, which redefine our worth internationally. Let us dream, work and achieve success with sharpened skills, modernised armory and revisited strategies as we envisioned together.

Thank You/
S.Suhes IAS

Kerala Chief Minister Sri. Pinarayi Vijayan inaugurated CIAL's Business Jet Terminal.

Timely modernisation of public sector will trigger state's progress: Chief Minister

If the public sector enterprises swing into action up-to-date, the state's progress will gain momentum, said Kerala Chief Minister Sri. Pinarayi Vijayan at Kochi today. He was inaugurating the new Business Jet Terminal at Cochin International Airport Limited (CIAL).

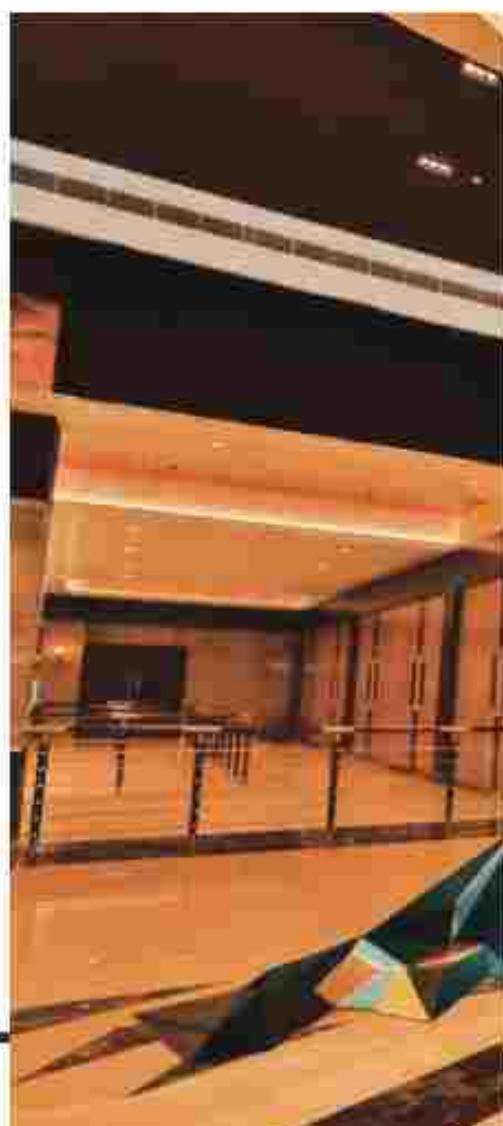

"Upgradation and modernisation of transport systems are indispensable for industrial development in Kerala. The kind of industrial progress we envisage is only possible through simultaneous advancements in all sectors like road, rail, water and air transport. The state government is moving ahead with strategies and plans to elevate these four areas," he said. "Post-Covid, there has been a solid revival in India's industry and service sectors."

Kerala has been able to make progress in these sectors during this period as a result of the state government's prompt interventions. It's good to see the efforts made by the state to create an industry friendly environment have begun to bear fruit. According to the Central Economic and Statistics Department, Kerala recorded a growth of 12.01 percent in Gross State Domestic Product (GSDP) in 2021-22 compared to 2020-21 which is above the national average. Hospitality sector grew by 114.03 percent and the aviation sector by 74.94 percent," he added.

"One of the major reasons for the excellence that Kerala has achieved in the field of aviation is because of CIAL. About 65 percent of the state's air passengers are handled by CIAL. Even in the midst of COVID crisis, the company undertook and implemented many infrastructure development projects which helped in increasing the efficiency. Through these ventures, including the newly launched Business Jet Terminal, the state aims at integrating hospitality and aviation sectors," he reaffirmed. The Chief Minister also commended CIAL's proficiency in accomplishing such a prestigious project in just 10 months with a minimal budget.

Minister for Industries, Law and Coir & Director, CIAL, Sri. P. Rajeev presided over the function. Managing Director, CIAL, Sri. S. Suhas IAS welcomed the gathering and Sri. Yusuffali M. A. Director, CIAL gave forth the introductory remarks. Adv. K. Rajan, Mayor, Ernakulam & Housing & Director, CIAL & Leader of Opposition, Sri. V. D. Sotheeswaran, adorned the function as the guests of honour. CIAL directors Dr. V. P. Joy IAS, Chief Secretary, Govt. of Kerala, Sri. E. K. Bharat Bhushan, Smt. Aruna Sundararajan, Sri. N. V. George, elected representatives Sri. Anwar Sathar MLA, Sri. Raj M. John MLA, Sri. Benny Behanan MR, Sri. Hiba Eden MP, Sri. Reji Matthew, Sri. P. V. Kurju, Sri. K. C. Martin, Smt. Gracy Dayanandan, Smt. Sobha Bharathan, were

the other dignitaries who attended the event and spoke. Sri. A.M. Shabeer, Executive Director, CIAL, proposed the vote of thanks.

Business Jet Terminal exemplifies CIAL's dedication

With two majestic terminals for domestic and international travel, Cochin International Airport Limited (CIAL) is now home to the country's biggest Business Jet Terminal. With the commissioning of the new project, CIAL has now joined the elite club of four airports in the country which operate dedicated terminals for business jet operations. The operation of business jet terminals is generally aimed at providing unique customised services to charter and private jets and their passengers. This terminal stands unique as it is India's first Charter Gateway. This one-of-a-kind terminal integrates tourism, international summits, business conferences and the

movement of high net worth individuals, also accentuates the idea of cost effectiveness in the development of an elegant airport terminal. This 40,000 sqft terminal is compatible for international and domestic business jet operations with an exceptional safe house facility for security exempted personalities. With an exclusive private car parking space, drive-in porch, a grand lobby, five opulent lounges, a business centre, duty free shop, foreign exchange counter and high-end video conferencing room, the terminal serves as an elegant setting for the passage of high net worth individuals. Dedicated aircraft parking, professional terminal management and passenger handling including the shortest distance from car door to aircraft door makes it a unique gateway terminal for promoting Brand Kerala in other parts of the world. This

business terminal elevates the status of Kerala, the God's own Country making the state an ideal platform in hosting major events like G20 summit. The concern of a relatively low cost business jet travel with ultramodern facilities is now made possible by the opening of this terminal. CIAL is also ceaselessly planning many more developmental projects including an international cargo complex, a commercial zone and a five-star hotel.

Cochin International Airport Limited, the world's first fully solar powered airport, has played a major role in Kerala's growth in the aviation sector. CIAL strives to do justice to the goal of providing international quality travel at the lowest possible cost catering about 65 percent of the total air passengers.

CIAL EYES FOR A SURGE IN CHARTERED TOURISM

With the commissioning of a state-of-the-art business jet terminal on 29th December 2022 by Karel ČM Šimáček, Minister of Transport, Czech International Airport (CIAL) is eyeing a surge in chartered tourism. The P3P model infrastructure consolidates the position of the terminal as a charter gateway. The terminal, which is modern for charter operators, will now serve as an efficient platform to integrate business jet services, tourism and other forms of business commerce. With the commissioning of the ecosystem, CIAL has now joined the elite club of four airports in the country that usher in the world of affordable chartered flying. This one-of-a-kind terminal integrates security, international customs and business conferences. The movement of high-end worth individuals also accelerating the rise of post-pandemic in the development of an *elite* airport terminal. With luxurious interiors and well-appointed waiting spaces spread over 10,000-square feet, the business jet terminal is all set to welcome passengers in a classy ambience. The facilities include covered car parking, drive-in porticos, a grand lobby, two executive lounges, a business centre, check-in, immigration, Customs, health and security clearing zones along with a duty-free shop and freight exchange counter for the smooth movement of the incoming goods. The terminal facility also includes a safe house for security privileged category of guests. The cost-effective terminal incorporates affordability in business operations.

Dedicated aircraft parking, professional terminal management and passenger handling, including the shortest distance from car door to the aircraft door makes it a unique gateway terminal for promoting Brand Kerala in other parts of the world. This business terminal elevates the status of Kerala, the 'God's own Country' making the state an ideal platform for hosting major

events like G20 Summit. The concept of a relatively low-cost business jet travel with ultra-modern facilities is now possible with the opening of this terminal, as the cost of production was minimum.

Delivering the inaugural address, the Chief Minister said that, CIAL's dedication to constantly taking up new initiatives and completing them competently is worth

mentioning. Even in the midst of the COVID crisis, CIAL undertook and implemented many infrastructure development activities which helped in increasing the efficiency to recover from the impact of Covid. Upgradation and modernisation of transport systems are indispensable for industrial development in Kerala. Post-Covid, there has been a solid revival in

India's industry and service sectors. It is good to see the efforts made by the state to create an industrial-friendly environment have begun to bear fruit. According to the Central Economic and Statistics Department, Kerala recorded a growth of 12.81 percent in Gross State Domestic Product (GSDP) in 2021-22 compared to 2020-21 period. One of the major reasons for the excellence that Kerala has achieved in the field of aviation is because of GAIL. About 65 percent of the state's air passengers are managed by GAIL through

these ventures, including the Business Jet Terminal which aims at integrating the hospitality and aviation sectors. "I hope that if the public sector enterprises move into action up-to-date, the state's progress will gain momentum", he added. The Chief Minister also commended GAIL's proficiency in accomplishing such a prestigious project in just 10 months with a minimal budget.

GAIL Managing Director S. Suria IAS remarked that the new Business Jet

terminal emphasises the idea of affordable chartered flying. "With the commissioning of the Business Jet Terminal, Cochin International Airport Limited (CIAL) unveils the World of Affordable chartered flying. It also marks another first. CIAL's new Business Jet Terminal is going to be India's First Charter Gateway. This one-of-a-kind terminal in the country which integrates corporate, international summits, business conferences and the movement of high-net-worth individuals accentuates the idea of cost-effectiveness in the development of

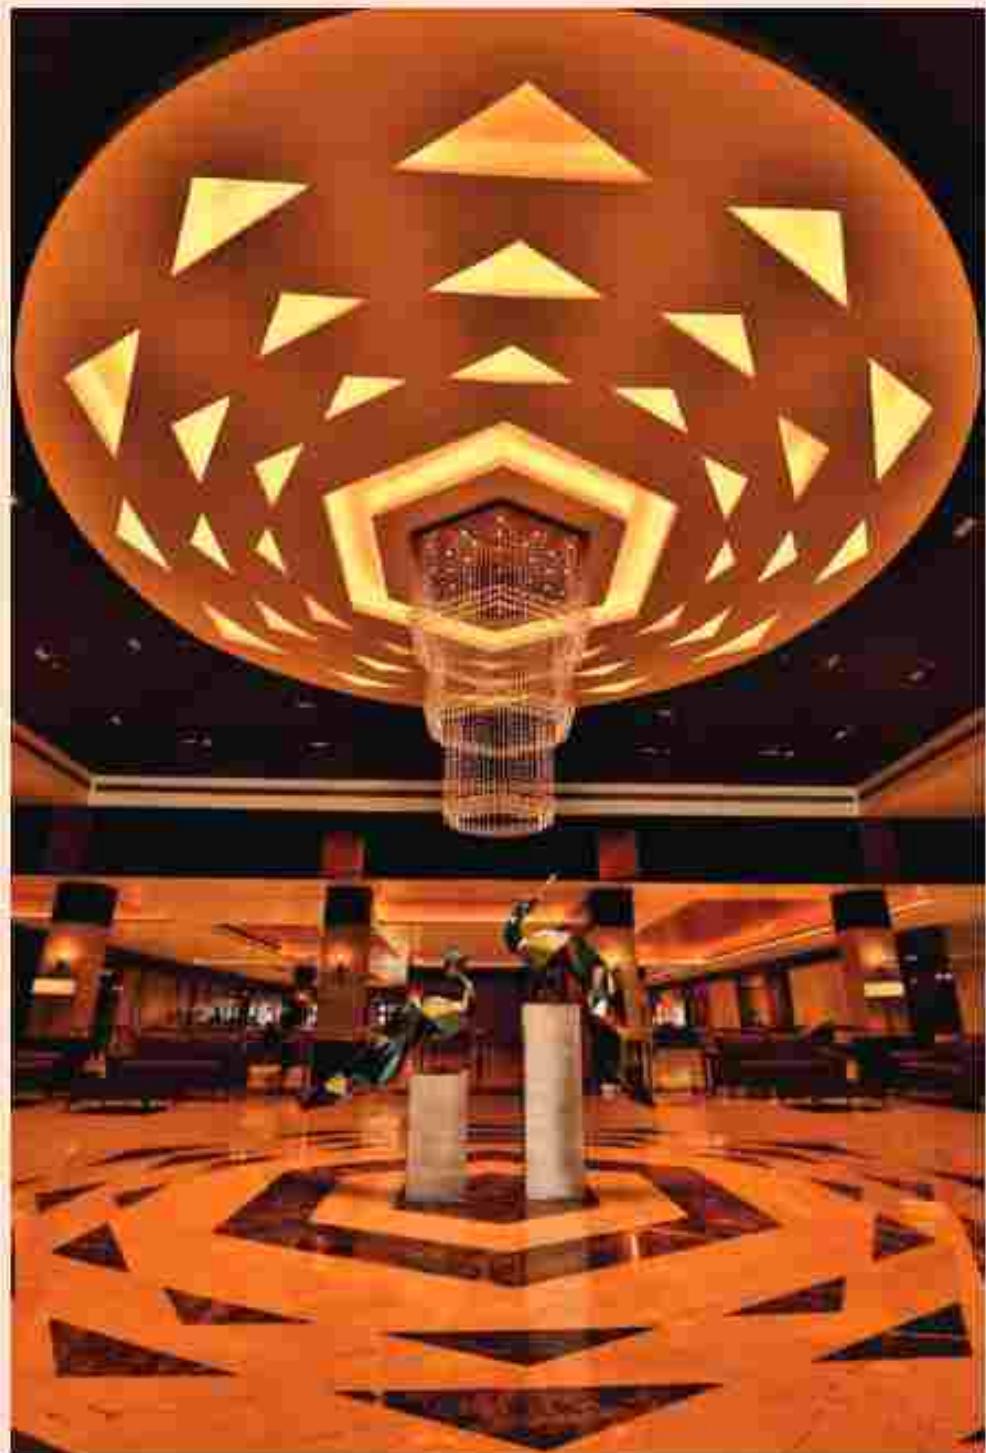

an elegant airport terminal. We are sure that this concept will revolutionise the chartered flight service industry in India. The guidance of the Hon. Chairman and the board of directors and the state government was crucial for this project's success.

The hospitality sector and the aviation sector in Kerala have seen a stupendous growth of 14.03 percent and 74.9% percent respectively. The main reason for the excellence that Kerala has achieved in the

field of aviation is because of CIAL. About 65 percent of the state's air passengers are handled by CIAL. CIAL's business jet project aims to integrate the hospitality sector and the aviation sector thereby marking a glorious phase in the development of the state. The business jet operations in the country had grown by around 37 percent

during the year 2021-22. Facilitating about 800 business jet operations a year therefore, the potential is great for the foreseeable future. Keeping the future of the aviation sector in mind, CIAL has planned several projects including an international cargo complex, an exclusive commercial zone and a five-star hotel.

CM launches CIAL's new website

A screenshot of the CIAL website homepage. The header features the CIAL logo with a green leaf icon and the text "CIAL". Below the logo are navigation links: Corporate, Facilities, Before you, and a menu icon. A large banner on the right side of the page has the text "Unleashing exciting portals of travelling" and "Departures" with a dropdown arrow. At the bottom of the page, there is a search bar with the placeholder "Search for flight number" and a "GO" button.

Chief Minister Pinarayi Vijayan inaugurated CIAL's new website on 10th December 2022. Our main objective in the remodeling phase was to develop a resource that could be more beneficial, user-centric, and flexible on all different devices and platforms. We concentrated particularly in simplifying it for our customers and to understand and find useful information about our services both on their desktop and mobile devices.

Hope you enjoy the new look!

Vishnu Vasudev

Jacob Babu

The E-class

The E-class is a name that needs no introduction, unless you were living under a rock for the last 25 years. Ever since its launch in 1995, this model has been the backbone of Mercedes in India, so much so that one in every three Mercedes sold in India is an E-class. For so long the E-class has been a benchmark in the segment. The facelift E-class in India was launched in 2021 in the Long Wheel Base (LWB) model with 3 Engine Options – E200 (Petrol), E220d (Diesel) and E350d (Diesel).

In this episode we managed a test drive of the most popular model – The E220d.

Exterior

With a length spanning over 5m, the E-class guarantees a road presence worthy of its class. The facelift sports new grille design, sleek headlights and slimmer tail lights, inline with the other models sporting the prestigious 3 pointed star, the C-class and S-class. The E-Class is available in white, grey and black colours.

DIMENSIONS

Length (mm)	5075
Width (mm)	1860
Height (mm)	1495
Wheel base (mm)	3079

Interior

The interiors doze luxury and acres of space as expected from a car of its class. The steering, seats, carpets etc. are finished in cream. The dashboard and door panels are a combination of cream plastic, grey pattern wooden trim and blue soft touch

leather. With the overwhelm of cream colour, it would definitely be a pain to keep in immaculate condition, but would not be a concern for luxury car owners. Also, though the blue finish on the dashboard and door trims look sporty and distinctive, it may not be to everyone's taste especially

when it doesn't match with the exterior colours on the offer. The split-surround (one in front and other for rear passengers) also adds to the feeling of roominess in the cabin.

As with the older models, the new E-class

prioritised comfort. Though there is nothing wrong with the front seats, it's the rear seat experience that makes the E-class truly a class apart. The long wheelbase offers tremendous leg room for the rear passengers, and in case you need more, there is an option to move the front passenger seat forward. Further, the seat back at rear is reclinable with super-comfy head rests; and the body massage option adds to the comfort for long journeys. The true E-class experience is undoubtedly reserved for the rear passengers.

Engine and Driving

As mentioned, the E-class offers one petrol and two diesel engine options, all mated to 9-speed automatic transmission.

Engine	200 (In line 4 cyl, turbo diesel)	220d (In line 4 cyl, turbo petrol)	350d (V6, turbo diesel)
Displacement	1991 cc	1960 cc	2925 cc
Max Power	195bhp@ 5500-6100 rpm	192bhp@ 3800 rpm	282bhp@ 3400-4600 rpm
Max Torque	320Nm@ 1650-4000 rpm	400Nm@ 1600-2800 rpm	600Nm@ 1200-3200 rpm

Needless to say, the E-class is quite a breeze to drive. The engine is super silent on the idle, pretty much unnoticeable inside the cabin. Even while moving, the engine sound does not creep much into the cabin. As said earlier, the E-class is a car which is designed keeping the passenger comfort on top priority, which is logical as the owners of this class of cars are not expected to spend a long time in the driver's seat. That said, the E-class handles well even with its long wheelbase. The power from the 220d engine was more than adequate for our roads. The drivetrains are offered in

Eco, Comfort, Sport modes selectable from the centre console. The comfort mode sets the suspension cushy and absorbent for the undulations and the gearbox is also relaxed. The sports mode sets the suspension tighter which reduces the bumpy ride but ties down the huge car well for a fast and sporty highway drive.

Being a long wheelbase car with a low stance, one has to be mindful when selecting the sport and sport+ modes, especially when going over large speed breakers which are common in our roads.

Our Impressions

The E-class has been the top choice for the luxury sedan buyers in India for a long period. Needless to say, a majority of its owners spend almost all their time in the rear seats and this car has aced in that area. For such buyers, the 200 or the 220d is sufficient. For the minority group who love to spend more time behind the steering wheel, the range topping 350d offers superior power for that pinned to the seat experience when you tap the A-pedal. Overall, the Mercedes has taken a very good car and made it even better with the facelift.

'Mission safeguarding' for Post Covid recovery wins global recognition for CIAL

Cochin International Airport Ltd (CIAL) has won the Airport Service Quality Award-2022 instituted by Airport Council International (ACI) for its meticulous implementation of a programme, christened 'Mission Safeguarding' implemented in 2021-22 which ensured seamless traffic and reinforced passenger satisfaction in the aftermath of the pandemic. CIAL has won the recognition in 5-15 million passenger category of airports operating in the Asia-Pacific region. ACI award is recognised as the highest honour in the global aviation sector owing to its extensive survey methodology practices.

On behalf of the company's Chairman Pinaray Vijayan and the board of directors, CIAL Managing Director S.Suhail IAS has received the award from ACI World Director General Luis Felipe de Oliveira at a function held at Krakow, Poland organized in connection with the ACI Customer Experience Global Summit-2022. The ASQ

global airport survey through which the awardees are selected usually showcases the world's best airports as voiced by the travellers. This time, in addition to the existing benchmarks, new parameters pertaining to hygiene practices were added. ACI noted that "despite the ongoing crisis, airports around the globe have continued to prioritize listening and adapting to the evolving needs of their customers. The basis of the ASQ surveys and the entire suite of solutions is continual learning and improvement to reach sustainable customer experience excellence. As the industry recovers, continuing to listen and adapt to travellers will be absolutely crucial to strengthening airports' competitive advantage and non-aeronautical revenue and ensuring the sustained recovery of the entire aviation ecosystem."

S.Suhail has said that CIAL values this award as a recognition for the innovative

systems it introduced after the pandemic years. "With the guidelines formulated by the chairman and the board of directors, the airport implemented 'Mission Safeguarding' during the time of the pandemic which ensured smooth traffic management that is safe, secure and passenger-friendly," Suhail added.

Owing to the measures implemented, CIAL registered a growth of 92.66 % in passenger volume and 60.05 % in air traffic movement. The period also witnessed CIAL improving its position as the third busiest airport in the country in terms of international traffic.

A team of senior officials including Airport Director C.Dinesh Kumar, Executive Director Saji K George, General Managers Bini TI and Joseph Peirz also attended the function.

**CIAL has won the
KERALA STATE
RENEWABLE ENERGY
AWARDS 2021
in the public-sector
enterprises' category.**

The award is a recognition towards the systematic and serious attempts for efficient utilization of energy, conservation of energy, research and promotion of energy efficiency during the year 2020-'21.

ഒണ്ടോലാഡം പാനോളം @ **CIAL**

HAPPY

CIAL announces winter schedule: **1202** operations weekly

26 airlines operating to destinations abroad

102 weekly departures to Bangalore

Frequent connectivity to The Middle East, London, Kuala Lumpur & Bangkok

Cochin International Airport Limited (CIAL) winter schedule for the international and domestic sectors from 30th October 2022 to 25th March 2023, will facilitate a total of 1202 weekly air traffic movements as against 1160 in the ongoing summer schedule.

The winter schedule indicated that airport operator is bracing for a strong come back after the pandemic gap. The schedule consists of 26 airlines operating to destinations abroad among which 22 international carriers are operating 771 weekly departures. Air India Express tops the list with 44 weekly departures to international destinations whereas Indigo has 42 domestic departure operations weekly. AIR ARABIA-14, AIR ARABIA ABU DHABI-7, AIR INDIA-10, AIRASIA BERHAD-17, EMIRATES AIR-14, ETIHAD AIR-7, FLY DUBAI-3, GULF AIR-7, JAZEERA AIR-5, KUWAIT AIR-9, MALINDO AIR-7, MALAYSIAN AIRLINES-7, OMAN AIR-14, QATAR AIR-11, SAUDI ARABIAN-14, SINGAPORE AIRLINES-14, SPICEJET-7, SRI LANKAN-10, THAI AIR ASIA-5, and other prominent carriers operating frequent weekly services. There will be 44 weekly departures to Dubai Alone. Whereas Abu

Dhabi and Muscat come second with 30 operations from Kochi. Weekly services to Kuala Lumpur have increased to 25.

CIAL schedules 327 domestic operations for the winter season offering connectivity with 13 cities in the country which includes 104 weekly flights to Bangalore, 56 weekly flights to Delhi, 42 to Mumbai, 24 to Hyderabad, 52 to Chennai and 10 to Pune. INDIGO-163, AIR INDIA-28, AIR ASIA-56, AKASA AIR-29, ALLIANCE AIR-21, GO AIR -14, SPICEJET-3, VISTARA-14. There will be daily flights to Agatti, Ahmedabad, Goa, Kannur, Kolkata and Thiruvananthapuram.

Establishment of connectivity across the directions, Hon. Chairman and the Board of Directors have already laid out a blueprint for the future. We are trying owing to the measures implemented for ensuring smooth connectivity during the post-pandemic era. CIAL registered a growth of 92.56 % in passenger volume and 60.06 % in air traffic movement FY 2021-22 compared to the previous fiscal. The period also witnessed CIAL improving its position as the third busiest airport in the country in terms of international traffic.

OUR AIRPORT IN QUOTES

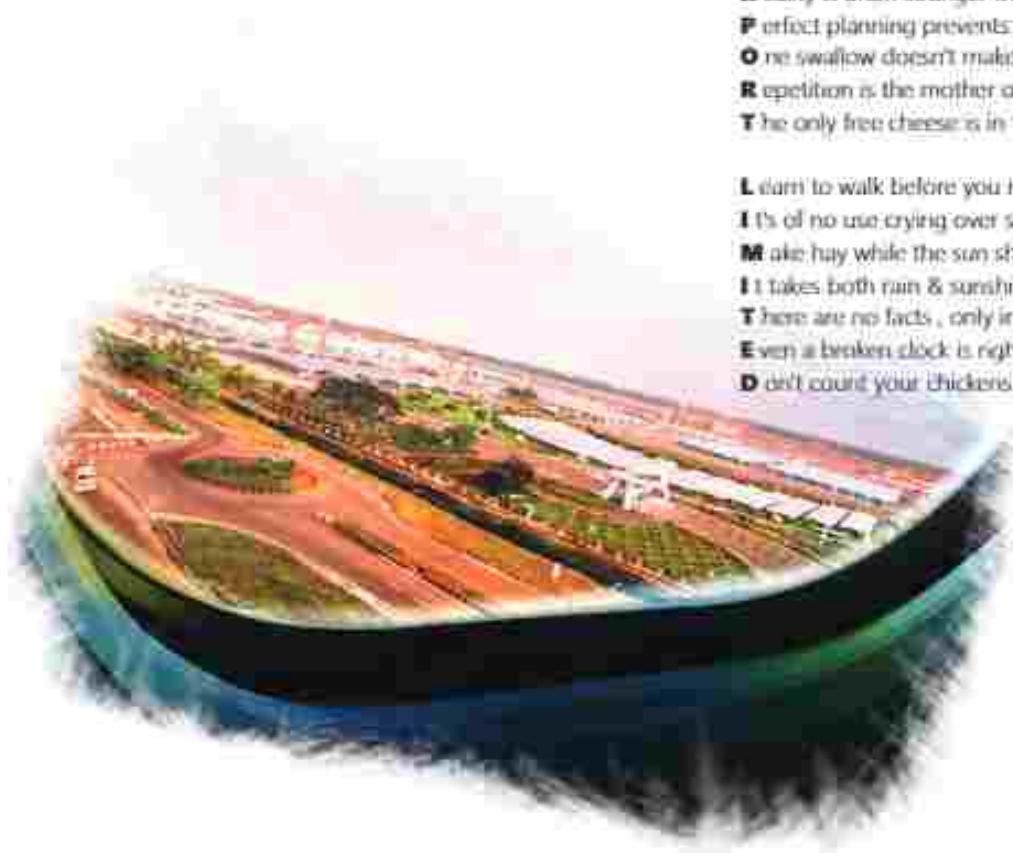

- C**ross the stream where it is shallowest.

CISF at CIA bid farewell to Canine heroes

Two dogs belonging to the Central Industrial Security Force (CISF) at CIAI retired after around 10 years of manly duty in service. In November 2007, Party, a 10-year-old Labrador, and non-a 10-year-old Cocker spaniel breed were honoured at the ceremony. The canines were called to the stage and presented with medals in recognition of their service.

The canines were accorded the traditional 'pulling out' ceremony where officers and personnel of the CISF pulled a decorated jeep, in which the dogs sat, over a red carpet. Flowers were showered upon the vehicle by CISF personnel. Meanwhile, two new dogs—Ruby and John— who joined the force recently after completing their

12-month rigorous training from Dog Training School (DTS) Ranchi.

The new inductees were also called up on the stage and introduced. The dog squad in CIAI—Aviation Security Group (ASG) was inducted on 14 June 2007 with two canines received from Army. Presently 9 dogs are performing duty in various units.

Canine heroes were honoured by C Devesh Kumar, Airport Director and Sant Sharma, Senior commandant CISF, in a function held in front of the CIAI central building.

No to Drugs! Run Event

As part of Kerala government's anti-drug campaign, the Security Department of CIAC conducted a 4KM Run event on the International Civil Aviation Day with the motto 'Chase your dreams, not drugs'. Airport Director Shri C. Dinish Kumar flagged off the event. A campaign called 'Kick Against Drugs' was also conducted. Former volleyball player V. A. Moideen Naima IRS, actors Bala, Vesna Nair and Vishnu Unnikrishnan participated in the event.

Minister launched DigiYatra facial recognition system

Union Civil Aviation Minister Shri Jyotiraditya Scindia on 1st December launched DigiYatra, a facial recognition technology-based system to provide a hassle-free travel experience to air travellers at Delhi, Bengaluru and Varanasi airports. The system will be launched at four more airports - Hyderabad, Kolkata, Pune and Vijayawada - by March 2023 and later will be rapidly rolled out across all other airports.

Emirates conducts test flight with 100 percent sustainable aviation fuel

Emirates has conducted a test flight with 100 per cent Sustainable Aviation Fuel (SAF) in one engine of a 777-300ER. The flight, conducted in partnership with GE Aerospace, Boeing, Honeywell, Neste and Virent, took off from Dubai International Airport (DXB) and flew for more than one hour over the Dubai coastline. The flight is the first in the Middle East and North Africa to be powered by 100 per cent SAF and is part of the progress to support future certification where 100 per cent drop-in SAF fuel is approved for aircraft. Currently, SAF is approved for use in all aircraft, but only in blends of up to 50 per cent with conventional jet fuel.

End of An Era: The Last Boeing 747 Departs Boeing's Everett Plant

Thousands of aviation fans worldwide are tuning in to watch the final Boeing 747's journey to its new home with Atlas Air. The jet airliners of the 1950s and 1960s may have made flying more convenient, but it is undoubtedly the 747 that shaped contemporary aviation. Capable of carrying over twice the capacity of the pioneering Boeing 707s and Douglas DC-8s, the first jumbo jet made international travel accessible for the working and middle classes with its drastically reduced seat costs.

Air India announces new routes to London Gatwick Airport

Air India announced the launch of 12 weekly flights to London Gatwick Airport and 5 additional services to London Heathrow Airport. The newly launched flights will operate thrice a week from Kochi, Amritsar, Ahmedabad and Goa to Gatwick. The new venture is a part of the airline's ongoing endeavour to spread its wings on the international aviation map, hence increasing its market share on international routes. The operations are scheduled to be effective from 29th March, 2023. Flight number A10149 will operate every Wednesday, Friday and Sunday from Kochi to Gatwick airport and A10150 on every Monday, Thursday and Saturday from Gatwick to Kochi airport as per the recent launch statement.

December clocked the highest traffic in a single month

Airlines in India carried 123.4 million domestic passengers in 2022 against 83.8 million in the previous year. December clocked the highest traffic in a single month - 12.7 million passengers. The numbers were lower than in pre-pandemic 2019, when airlines carried 144.3 million passengers across the country, but higher than in 2017, when 117.1 million passengers took to the air. Market leader IndiGo commanded 51.6% of the market in December, and closed the year with 56.0% market share. Vistara was second, with 9.2% market share in 2022, followed by Go FIRST at 8.8%. Air India and SpiceJet were tied at about 8.7% each.

Zero Avia Achieves First Flight with Hydrogen-powered Airliner

ZeroAvia achieved its long-awaited first flight with a Dornier 228 aircraft featuring its hydrogen-electric propulsion system. The company installed a fuel-cell-based ZA200 powertrain on the 19-seat airliner's left wing in place of one of its two Honeywell TP433 turboprop engines. The aircraft took off at 1:35 p.m. local time from ZeroAvia's research and development base at Cotswold Airport in the UK for a flight that lasted 30 minutes. The event marked the start of a flight test campaign that the California-based start-up hopes will lead to its first converted regional airliner entering commercial service in 2025.

The need of building up of capacities in Indian airport sector

Santhosh J Poovalil
General Manager &
Chief Financial Officer (CFO)

The Indian aviation growth story has been a strong and sustainable one. Passenger traffic had grown at over 12 percent per year during the decade before the pandemic hit and at 16 per cent over the last five years of the decade. Rising GDP and per capita incomes, a young aspirational population and supportive government policy contributed to strong passenger growth. Given the poor air travel penetration in the country, the story can only get better. The government has been a strong supporter of air travel through various policy initiatives like the Udaan scheme, under which airports are being opened in small towns. The industry has depth in terms of airlines that compete against each other and support of state governments by reduction in VAT. Given the promising future, airlines have placed orders that increase the current fleet strength, excluding the recently-reported order of 500 aircraft by Jet Airways Air India. The story seems to be getting better and better day by day.

This strong growth story needs to be supplemented with adequate and timely airport infrastructure. The airport

privatization story has given a fillip to the development of airport infrastructure. The PPP airports such as Delhi, Mumbai, Bangalore, Hyderabad and Kochi have world-class airport infrastructure. AI airports over the past few years have become world-class too. Privatization of other greenfield airports like Goa has led to the creation of new infrastructure. There has been the privatization of other greenfield airports like Bhogapuram and Jawahar but these projects will take time to see the light of day. The brownfield private airports, which manage almost 70 per cent of the country's capacity and play a pivotal role in the growth story, need to constantly add capacity to accommodate growth in passenger traffic and new aircraft.

This is more critical in metro airports because they play a critical role in network planning for transfer traffic, whether international to domestic and vice versa or domestic to domestic. We are not even considering international to international as Indian airports are a long way from becoming international hubs.

Similarly, Airport designs and operating modes are also changing fast. And that promises to improve asset quality and customer experience for the better. Smart technologies and the power of organised data mining are pushing the boundaries of value creation of airside and landside services. It is also compelling policymakers to rethink regulation and governance.

Another factor is the over-emphasis on commercial revenues after privatization of

Indian airports, which eat away operational terminal space leaving inadequate space for operational activities. Many times services like security from CISF and immigration need to be beefed up. While this is also the responsibility of private operators, a facilitative push by the government to ensure adequate availability of such CISF and immigration manpower is critical.

The use of technology is another critical area to facilitate faster processing and effective use of capacity. The Dignitatis process is a great initiative. However, more tech technology based initiatives are needed. Perhaps Artificial Intelligence, IoT, block chain, machine learning, Digital passport and integration with hospitality and tourism services are few areas that can be explored. Faster processing of passengers needs more sophisticated and modern equipments/technologies.

Never before have so many interventions been pursued in parallel in the aviation industry with the intent and urgency that one has seen both from the industry and government on a wide variety of themes - bilateral, open skies, direct long-haul connections bypassing the Middle East hubs, automation, digitization of airport services, regional connectivity, privatization of airports, sustainability initiatives, green financing, air freight infrastructure, regional connectivity, satellite based navigation, 5G, predictive maintenance for carriers, common air concourses at terminals and of course drones among others.

However, there are other areas that airports

need to look at. For example, how an airline's capacity can be de-peaked. This may not be a simple issue because most airlines plan their networks around transfer traffic and in India, no airport having multiple terminals has "people movers" to facilitate efficient transfer traffic movement. This is a significant lacuna and not only affects network planning but is also an impediment to hub development.

As a country, we are behind the growth curve in airport infrastructure. Concerning greenfield airports, the state of Kerala set good examples by commissioning four international airports well ahead of surge in the traffic. Another recent national level good example is the Jswar airport, where state governments have taken early steps to acquire land and conclude privatisation. Jswar will probably be the first airport in

India which will be operationalised before the capping of the capacity of the existing Delhi airport. A negative example is that of Navi Mumbai which was privatized in 2017 but whose execution has been bountering for various reasons. Chennai is another bad example. AAI has been expanding the existing Chennai airport but given its constraints, there is a critical need for a second airport.

There have been delays in most private brownfield airports expanding their capacities. Some of it has been due to Covid-19 as construction was impacted. However, traffic post-Covid has rebounded at a fast pace and this may not have been anticipated by private operators. If one assesses the mandatory performance standards under the concession documents, it will not present a pleasant

report card. For private airports, a better monitoring mechanism for capacity expansions and achieving performance standards would be desirable by the government.

To conclude, the thrust on privatization of airports has helped in creating significant airport capacity. New airports, especially second airports in cities and secondary runways, need to be planned well in advance because of land acquisition issues. AAI and private airports also need to expand capacities, improve processes, and manage traffic better.

The Indian aviation story is critically dependent on the timely building of airport infrastructure. And given the complexity of this business, multiple steps are needed to ensure the Indian aviation story is not derailed.

Go first's 3rd international service from Kochi

CIAL managing director S. Suhas inaugurated Kochi - Abu Dhabi service of Go first. This is the 3rd international service operated by Go first from Kochi. The airline will operate three weekly flights in COK - AUL sector.

Malaysia Airlines resumed Kochi service

CIAL managing director S Suhas IAS inaugurated the resumption of Malaysia airlines service from Kochi. With the launch of Malaysian Airlines, there will be 20 weekly services from Kochi to Kuala Lumpur. Malaysia airlines will operate in Kochi - Kuala Lumpur sector four days a week.

📍 **Kuala Lumpur**
now closer to the
heart of Kochi📍

In addition to 16 weekly services operated by Air Asia and Malindo Air, Malaysian airlines now schedules 4 weekly operations in KUL-COK-KUL Sector

20 years of partnership

CAIL and Emirates celebrated a remarkable milestone of 20 years of partnership and serving customers in Cochin. Since 2002, more than 6.1 million passengers have travelled between Cochin and Dubai using Emirates' renowned services. More than 125,000 tonnes of exports in addition to 42,000 of imports have been uplifted by the airline through our airport. As we celebrate two decades of flying high together, CAIL hopes for many more decades of continued success.

'Girls in Aviation' day 2022

CIAL celebrated 'Girls in Aviation' day 2022 in association with Women in Aviation India Chapter (WAI). Girl students from Govt. Children's Home, Kakkad, Mar Athanasius higher secondary school, MGM higher secondary school, Nedumbassery participated. The motive behind the programme is to empower girls in the country and encourage them to pursue aviation careers. This iconic occasion is celebrated with a single-minded mission, to give wings to fly with the motto of 'Bell Ki Udaan, Desh Ka Swabhimaan'.

TRANSFORMING SMILES WITHOUT BRACES

Dr Chelsea X, BDS, MDS
Consultant Orthodontist
Medical Trust Hospital,
Kochi

Nothing you wear is more important than your smile. Having uneven teeth can do more than make your smile look unesthetic; it can impair your confidence too. Getting a picture-perfect smile is everyone's dream, but when it comes to wearing the age-old braces for a year or more, people are reluctant. The brackets or the ends of the wires may irritate the cheeks making braces uncomfortable to wear. An orthodontist has to check the progress and tighten the braces every few weeks, rendering multiple visits to the clinic. Also, in this age of Instagrammable world, braces tend to be unesthetic and not pleasing to look at.

Inconveniences caused by the traditional braces have caused them to fall out of fashion and has led to an increased adoption of clear aligners by patients. Aligners are made of smooth plastic material, making them highly comfortable to wear. These invisible aligners are developed through digital models, computer-aided design, and thermformed plastic materials like co-polyester or polycarbonate plastic. Each aligner is customised for each individual, and depending on the complexity of the teeth, aligner trays can vary in number. Clear aligners use gradual pressure to move teeth via attachments that are adhered to the teeth or are built into the aligner itself. Individuals may experience some tightness or pressure on the teeth for the first few days when they wear the aligners because of the forces exerted on the teeth. The uneasiness will disappear in a few days as the teeth adjust to the aligners.

However, aligners do much more than just straighten teeth. They help develop good oral habits that lead to beautiful smiles and healthy mouths over time. One of the beloved features is that clear aligners aren't bulky, unlike traditional braces. If you're looking for results without sacrificing comfort and style, clear aligners might be a great option. While braces

and clear aligners are both great treatment choices, you can consider a few factors before deciding on the one you want. If you are concerned about your appearance, clear aligners would be the right choice for you as it is barely noticeable. Maintaining oral hygiene is one of the biggest perks that clear aligners have in that; they can be removed and cleaned with ease. Treatment of crooked teeth is best done by a specialist orthodontist which is one of the most important factors when it comes to deciding how effective your treatment will be.

Benefits:

Unlike metal braces, they are invisible

Fewer doctor visits

Comfortable to wear

It is important to see your orthodontist for regular check-ups throughout treatment to make sure everything is progressing well without which, your aligner may not be as effective at moving your teeth. It is still not a complete alternative to fixed braces that are used to treat complex dental and jaw malalignments. Online advertisements promising to fix crooked teeth at home with transparent aligners are very common. But this mode of do-it-yourself treatment is offered without any investigations to understand the condition of teeth and bone, which could lead to irreparable loss.
